

MOBILE IMAGEBASE

Abstract Of The Disclosure

A method for synchronizing database records in a school is provided where a master database is populated with student records and photographic images. The master database is loaded onto a central computer and the student records and photographic images are transferred from the master database to a plurality personal digital assistant devices. The Mobile Imagebase provides a conduit for the efficient updating of the student records and monitors the synchronization on a record and user level. In addition, photographic images may be updated on the personal digital assistants at the school.
